Cómo elaborar un informe

¿Cuáles son los pasos?

1. Selección de fuentes de consulta: prestigio, calidad y objetividad (organismos oficiales, instituciones de referencia, etc.).
2. Lista de documentos de lectura y análisis (teoría, datos, expertos, etc.)
3. Selección de los hechos más importantes tras la lectura que definen el escenario inicial.
4. Desarrollo personal de un análisis del caso.

¿Cómo lo elaboramos?

1. Definición del escenario de análisis.
2. Identificar la cuestión o problema sobre el que se va a hacer el análisis.
3. Análisis personal del caso donde se presenta una solución al problema o se estudian las causas, o las consecuencias.

Abstract

Purpose – The purpose of this paper is to investigate the significance of Web 2.0 and social media for organizational development and adaptation to an ever-changing business environment and its successful managing. A model is proposed based on the concepts of innovative economy, knowledge management and social media for value creation in knowledge-based industries.

Design/methodology/approach – The paper examines critical factors that influence the role of social media in organizational change and value creation in knowledge-based industries.

Findings – The paper contributes to discussion about the increasingly important role of social media in the value added chain in knowledge-based industries.

Research limitations/implications – Social media are still an emerging phenomenon and further studies are required to investigate these relationships over a longer period of time.

Practical implications – The topic is relevant for designing corporate strategies in knowledge-based companies becoming a part of global networks. Better understanding of the impact of social media on value added could significantly enhance both the top and bottom lines.

Originality/value – The paper explores when and why the inexpensive, but increasingly wider, use of social media in knowledge-based industries is preferred to traditional media. This paper intends to give executives practical hands-on advice for using social media in business campaigns.

Keywords Social media, Web 2.0, Value added chain, Innovative economy, Knowledge management, Networking, Organizational change

Paper type Research paper

1. Introduction

Knowledge management is becoming an increasingly important leverage point for organizations that could be used to lift their efficiency, innovation and thus competitive abilities (Davenport and Prusak, 2000; Rowley, 1999). Organizations that implement knowledge management recognize knowledge as the basis for competitiveness and as the key to business success (Drucker, 1993; Nonaka and Takeuchi, 1995).

The fundamental purpose of knowledge management according to Handzic (2009) and Thierauf and Hoctor (2006) is to collect, organize and process knowledge into a form that is useful to all employees. An important role in knowledge management is played by applications that exist in the organization, such as intranet, enterprise resource planning systems (ERP) and customer relationship management systems (CRM). Such applications store transactions and customer data values for business decision

New Global Strategies for Competitive Advantage
Porter, Michael E
Planning Review; May/Jun 1990; 18, 3; ABI/INFORM Collection
pg. 4

New Global Strategies for Competitive Advantage

By Michael E. Porter

Why do some nations win or lose a share of world trade? Michael Porter, author of the two most widely quoted books on strategic management, has just published a masterful new book, The Competitive Advantage of Nations, *which offers a theory to explain the triumph of some nations in some markets.*

Why are some nations able to produce certain products that are recognized as the best in the world and, as a result, capture international market share? Or more bluntly, why do nations win or lose in the battles for world trade? Harvard Business School's Michael Porter, who is the author of the two most widely quoted books on strategic management and a consultant much in demand, has just published a new book that offers a theory explaining the triumph of some nations in some markets. The following excerpt is a condensation of Chapter 11, "Company Strategy," from The Competitive Advantage of Nations, *The Free Press, 1990, 831 pages.*

Reduced to a phrase, Porter's thesis is: High-intensity domestic competition breeds international success. But his new paradigm for international competitive advantage is best expressed in a diamond-shaped chart (see Exhibit 1), showing that there are key elements of domestic competitive conditions that must all be fostered if success is to be sustained. The categories are:

- *Company strategy, structure and rivalry;*
- *Factor conditions;*
- *Demand conditions; and*
- *Related and supporting industries.*

Why, for example, did Japanese manufacturers take the market lead for copiers away from powerful Xerox? Porter's "diamond" provides the framework for analysing the issues; it's the product of four years of research on ten nations. For those who want the speed-read version of his basic theory, we recommend "Why Nations Triumph," Fortune, March 12, 1990, pages 94 to 108.

In our selection from the book, Porter suggests which actions top management must take at home to foster strength abroad. His proposals will frighten some managers to their very core.

LECTURAS

MANAGING STRATEGIC SURPRISE BY RESPONSE TO WEAK SIGNALS
Ansoff, H Igor
California Management Review; WINTER 1975; 18, 2; ABI/INFORM Collection
pg. 21

H. Igor Ansoff

Managing Strategic Surprise by Response to Weak Signals

If we could first know where we are and whither we are tending, we could better judge what to do and how to do it.
Abraham Lincoln, 1858

Everything (before the Arab oil embargo) is history. . . . The future is a whole new game.
Irving Shapiro, Du Pont Company, 1975

Neither past experience nor academic training has prepared many younger managers for such reversal in the approach to business planning and operation.
John T. Hackett, Cummings Engine Company, 1975

The paradox of strategic military surprise has been a familiar phenomenon throughout recorded human history. From the Trojan Horse to Pearl Harbor to the Yom Kippur war, nations and armies have been confronted with sudden crises, in spite of ample information about enemy intentions.

The Problem

The recent "petroleum crisis" was a comparable event in the industrial world: large and important firms were suddenly confronted with a major discontinuity, although advance forecasts of Arab action were not only publicly available, but on the day of the surprise, were to be found on the desks of some of the surprised managers. Because of its pervasive scope, the petroleum crisis highlighted the danger of strategic business surprises. But such surprises had overtaken numerous firms, one by one, from the early 1950s—enough of them to provide material for a *Fortune* book titled *Corporations in Crisis.*

In the aftermath, it was argued that these corporations were caught unaware because they lacked modern forecasting and planning systems. But in the 1970s a majority of the firms caught by the petroleum crisis had such systems. In the mid-1960s, the management of one of the world's largest conglomerates proudly displayed its planning and control. A week after the public display, the same management made a red-faced admission of two multimillion-dollar surprises: a major overrun in its office furniture division and another in its shipbuilding division.

The American automotive industry, a leader in modern planning and control, was certainly unprepared for the forceful congressional position on automotive safety. And a bare four years later it was again "surprised" by the success of the small car. Such events need little support from the voluminous literature on futurology to predict that discontinuities and surprises will occur with increasing frequency. If, as experience suggests, modern planning technology does not insure against surprises, the technology needs to be extended to provide such insurance.
